

## OCD, ADHD, PARENTAL STRESS?!!

Are you interested in finding out more about your child's disability? Or how it may be affecting you?

Researchers at the University of Cape Town are conducting a study to understand how **Obsessive-Compulsive Disorder (OCD)**, **Attention Deficit (Hyperactivity) Disorder (ADHD/ADD)** and the accompanying **Parental Stress** affect the daily lives of the people involved.

This study calls for the **participation of children 6-17 years** of age who have been diagnosed with OCD or ADHD/ADD and their **parents/guardians**. Participation in this study would be greatly appreciated.
